WOOLIE

Adding BioCanna to your growing medium will increase the availability of nutrients, allowing optimal absorption of the growing form.

Maximize the yield when growing vegetative and flowering. BioCanna increases the yield by 20% to 40% of organic nutrients per volume and 20% will give you an extra 20% yield!

1 liter (2.64 gal) per 100 l for the most effective results, raise to 4ml per 100 l for optimum results.

Example: 4 liter (1.1 gal) of BioCanna per 100 l for the BioCanna vegetative or flowering mode.
